

TW1829

Multi-Constellation Dual-Band Antenna

Frequency Coverage: GPS L1, L2 | GALILEO E1 | BEIDOU B1 | GLONASS G1, G2

Overview

The TW1829 employs Calian's patented Accutenna[®] technology providing dual-band GPS/QZSS L1/L2, GLONASS-G1/G2, Galileo E1, and BeiDou B1 coverage and is especially designed for precision dual frequency positioning where light weight is important.

The TW1829 features a precision tuned, circular dual-feed, stacked patch element. The signals from the two orthogonal feeds are combined in a hybrid combiner, amplified in a wideband LNA, then band-split for narrow filtering in each band and further amplified prior to recombination at the output.

The TW1829 offers excellent axial ratio and a tightly grouped phase centre variation.

The TW1829 has a pre-filter which increases the antenna's immunity to high-amplitude interfering signals, such as LTE and other cellular signals.
