

## **PRESS RELEASE**

### **Tallysman Wireless dramatically improves the Tallysman Sprite™ AVL reporting rates on Digital 2-Way radio networks**

Ottawa, Canada, December 3rd, 2014 – Tallysman Wireless Inc., a leading provider of high performance, high quality RF and GNSS components, and wireless Telematics solutions, today announces the release of Tallysman Sprite™ precise AVL tracking feature for its Telematics products. The Sprite precise tracking feature dramatically improves location reporting rates over Digital 2-Way radio with no increase in network traffic. For example, a vehicle reporting every 10 minutes can be accurately tracked at a 10 second tracking resolution which is comparable to cellular carrier reporting rates.

Tallysman's novel data compression can pack in excess of 100 accurate location reports into a single short data transmission. This provides reported location resolution down to a few meters, particularly important for mobile services audits, fuel taxation, and paid services such as garbage collection etc.

Combining the Tallysman Sprite precise tracking capability with Tallysman's TruFleet™ Fleet Management System, radio system operators can significantly increase the number of data users per radio channel.

Tallysman's Fleet Management System manages the high rate location reports and client on-line reports without compromising system performance.

The Sprite precise tracking solution is available for all Tallysman Sprite™ TW200 and TW250 Telematics platforms. The combination of Tallysman Sprite™ precise tracking capability with existing event driven reports, such as I/O transitions, odometer, engine Idle times, geofences and speed etc, truly makes this solution the most cost effective Fleet tracking Solution available.

The following link will take you to a short video outlining the Tallysman Sprite precise tracking capabilities.
