

Press Release

Tallysman® announces High Gain GNSS Antennas

Ottawa, Canada – September 6, 2017 – Tallysman, a leading manufacturer of economical high performance GNSS antennas and related products, is pleased to announce the availability of two high gain (50dB) GNSS antennas: the TW3152 and TW3752.

High gain GNSS antennas are useful in situations where long cable runs are required, such as in timing systems and GNSS re-radiator systems.

The TW3152 provides reception of GPS L1. The TW3752 provides reception of GPS L1, GLONASS G1, BeiDou B1, and Galileo E1 signals. Both antennas employ Tallysman's *Accutenna*® technology which has proven its capability of providing a high degree of multipath signal rejection through the full bandwidth of the antenna.

Also, these antennas are triple filtered to prevent the saturation of the front end LNA by strong near frequency and harmonic signals (which are a growing concern throughout the World).

These antennas are available with a choice of radome shape (flat or conical), colour of radome (white or grey), and a wide variety of connectors.

About Tallysman

Tallysman manufactures a range of GNSS antennas from the highest performing reference antenna in the World down to the highest performing compact antenna in the World. Tallysman's mission is to provide GNSS antennas which meet the needs of a new generation of GNSS systems providing unprecedented accuracy at ever decreasing prices. (www.tallysman.com). When precision matters, Tallysman has the solution.

Tallysman was founded in 2009 and is headquartered in Ottawa, Canada
